SUMMARY

Self-taught iOS developer with 2 years in iOS development, focused on SwiftUI and Clean Architecture. Built Tablio, an iPad POS system for European restaurants, from scratch as the sole iOS developer in a cross-functional team, and now building LifeWord, my own English vocabulary app with 50+ categories. Former food business owner with a medical background, bringing product thinking, attention to detail and a habit of automating repetitive work.

EXPERIENCE

iOS Developer · SvartDev OÜ (Tablio)

2026 · 5 months

Estonia · Contract, remote · Team: iOS, Android, backend, design

- Built the Tablio iPad POS app from scratch to a finished product as the only iOS developer: 30+ screens implemented from Figma designs.
- Delivered the full order flow: table floor plan, order creation, payment in cash or by card, split bill, closing orders and order history.
- Built menu management with product variations, modifiers, ingredients and allergens, plus staff roles, warehouse and VAT settings.
- Created role-based dashboards with separate widgets for owners, managers and waiters.
- Designed the app mock-data-first on Clean Architecture with protocol-based repositories, so the real API could replace mock data without UI changes and iOS work could run in parallel with the backend.
- Used my experience running a food business to suggest workflow improvements, and shaped many screens together with the designer.

PROJECTS

LifeWord · English vocabulary app for Ukrainian speakers

2026 – present

Personal product, in active development · github.com/KSENGO06/WordLife-

- Designed and built the app solo: words are learned through interactive photo scenes with tappable, voiced labels, word cards and 3 levels of exercises.
- 50+ categories of words and phrasal verbs with images and audio; progress tracking, daily goals, American and British accents, widgets and notifications.
- JSON-driven content model: new categories need no code changes. Built a debug-only tool for placing word labels on scene photos.
- Automated audio generation with Python and the ElevenLabs API, cutting production time per category from about 3 hours to 3 minutes.
- Firebase Auth sign-in; profile, personal dictionary and subscription screens.

SKILLS

Languages & UI: Swift, SwiftUI, adaptive layouts for iPhone and iPad, HTML, CSS

Architecture: MVVM, Clean Architecture, repository pattern, dependency injection

Data & networking: SwiftData, Firebase (Auth, Firestore), Codable/JSON, UserDefaults, REST APIs with URLSession, async/await

Apple frameworks: WidgetKit, local notifications, AVFoundation audio

Tools: Xcode, Git and GitHub, Figma, Notion, Python automation, ElevenLabs API, AI tools for content

EDUCATION

Ivano-Frankivsk Basic Medical College

2016 – 2020

Medicine

LANGUAGES

Ukrainian (native) · Russian (fluent) · English (B2) · Italian (A2)
